One of Plant Operations’ guiding principles addresses our responsibility to the environment:

“We will respect the physical environment that we share. We will wisely use and preserve the resources at our disposal by reducing waste, recycling, and whenever feasible, using recycled materials.”

As one example of carrying out this principle, all members of the Plant Operations Division are expected to take appropriate measures to reduce pollution and conserve fuel.

Effective immediately, all drivers of Plant Operations vehicles are required to turn off the ignition of their running vehicle if 1) they are going to be away from the vehicle for more than five minutes or 2) they don’t know when they will return to the vehicle. Certain vehicles with diesel engines or special setups will be exempt from this policy when temperatures or situations require, and will be marked accordingly.
