Metals will be collected together (mixed). When a large quantity of valuable metal is present, sorting can be done by the shop. Waste Management Services (WMS) is responsible for pricing.

WMS will haul large quantities of metals using roll off dumpsters. Shops will be charged a hauling fee and reimbursed for the value of the metals. Smaller quantities will be picked up by WMS at no charge and no reimbursement.

Waste Management Services is responsible for managing scrap metal recycling contracts.

Licensed and approved contractors can haul metals as long as contracts spelling out specific reimbursement and reporting practices are in place.

Demolition will be handled as a separate contract from any waste or recycling contract and must be with a licensed contractor. Note: Contractors are required to report load data to WMS. Demolition contractors may include scrap metal recycling in their specs, given that they are licensed and approved. Typically, the value of the scrap is deducted from the demolition costs. Toxicity Characteristic Leaching Procedure (TCLP) testing is not required for painted metals as per UM OSEH.
